**Subject:** Carson City Center Project MND

Dear Mr. Signo:

SCAQMD staff has reviewed the above-named document and has the following comment:

The lead agency used URBEMIS 2002 to calculate the proposed project's air quality impacts.

Please note that URBEMIS 2007 is now available and it is recommended that the model be used to assess the air quality impacts of this and future projects instead of URBEMIS 2002. The advantages to using the URBEMIS 2007 model are that the model uses EMFAC 2007 on-road emission factors, the OFFROAD 2007 factors for off-road equipment, and also calculates PM 2.5 and CO2 emissions. URBEMIS 2007 can be accessed at the following website:  
[www.urbemis.com](http://www.urbemis.com).

Please attach the revised model output printout to the Final MND.

Please call me if you have any questions.
