My name is Ronald J. Martin, I live in Fresno, and I am concerned about air pollution and climate change, which is in the process of killing many of our people now and in a few years millions of our future generations. You should enact PARs 1111 and 1121, requiring that new heaters all be electric, not gas powered since gas home heaters release eight times more NOx and four times more PM 2.5 than all the gas-fueled power plants in the area. For the love of future generations enact these Proposed Rules!

- Heating equipment can last 20 years or longer, so it's important to install zero-emission equipment at the time of burn-out to avoid locking in decades of future pollution and gas costs that fall on ratepayers. Only ~5% of heating equipment breaks in a given year—meaning the upgrade will be gradual while helping to ensure air quality improvement.

Subject: [EXTERNAL] Please SUPPORT for PARs 1111 and 1121

Dear Chair Delgado and AQMD Board Members,

I live in the South Coast region, and clean air is personally important to me because:

1. I like **breathing**.
2. I'll soon have a young child, and I'd like them to be as healthy as possible.
3. I want every child to be as healthy as possible, too!

I note that the California Energy Commission is running a very impactful [rebate program](#), funded in part by the Inflation Reduction Act, to retrofit homes with heat pump furnaces and water heaters. I was able to use an earlier version of this program to affordably replace my aging gas water heater. I love the **energy savings**, I feel **safer** in my own home, and I'm excited that the water heater can help address our **grid's resilience** by participating in demand response programs.

I also think the **health benefits** detailed on the AQMD's own fact sheet are wonderful and important:

Health Benefits

Once implemented, these rules will prevent:

 **4,000** premature deaths

 **16,000** cases of newly onset asthma

 **4,000** emergency room visits

I'd so love to see a combination of rebates and regulation support families and communities in **choosing the healthiest, safest, and technologically advanced home appliances**. Please vote **YES on Rules 1111 and 1121!**

Thank you.

Hello,

My name is Kelsey, I live in Los Angeles, and I like to breathe clean. Please vote YES on Proposed Rules 1111 and 1121. Clean air should not be up for debate. Please stand with public health, not polluters, and vote YES on Rules 1111 and 1121.

After suffering for years with asthma, I don't want future generations to have to suffer in the ways that I have. We can take small steps to help to better the air in our community so that those who come after don't have to go through the same experiences.

From a numbers perspective, clean, zero-emission appliances are increasingly affordable with local, state, and federal incentives. Public health and protection from extreme heat should drive decision-making on these important rule amendments for the millions of residents in the Air District. South Coast AQMD has the power to protect our health and safety in the coming years.

Thank you,

From: Jean Woo [REDACTED]
Sent: Saturday, February 15, 2025 3:48 PM
To: Clerk of Board
Subject: [EXTERNAL] Air quality resolutions to reduce pollutants from gas fired furnaces etc

Dear Clerk of the Board,

My name is Jean Woo. I live in Berkeley, CA and am very concerned about the continued use of fossil fuels for hot water heating and heating/air conditioning. I have made the transition to a heat pump water heater and heat pump, as well as induction cooking and electric vehicle. The new appliances work better than the older ones they replaced.

I have a history of asthma, so experiencing the massive air pollution from wildfires for the past few years is a good reason to stop creating indoor and outdoor pollution in everyday life. Helping consumers make the transition to decarbonize homes and businesses is imperative to move us closer to climate goals. It certainly appears that utilities are making record breaking profits. They should an amount equal to that which goes to shareholders, into a Resilience and Climate Fund to provide low interest loans and on-bill financing for consumers who have trouble paying for these needed changes. After all consumers are actually first-hand affected and should have the same standing as shareholders.

Do not heed the naysayers. We cannot afford to allow continued gasoline to fuel our homes and businesses, and have more storms, wildfires, and droughts destroy cities and neighborhoods. I support the restriction of air pollutants going forward and recommend all parties plan the fastest route that makes this happen.

Sincerely,

Jean

Sent: Sunday, February 16, 2025 11:08 PM
To: Vanessa Delgado; Clerk of Board
Subject: [EXTERNAL] SUPPORT for PARs 1111 and 1121

Dear Chair Delgado,

I hope this is not too late. Please vote YES on Proposed Rules 1111 and 1121. I am an environmentalist and concerned California resident writing to you with public safety in mind.

The Los Angeles Air Basin currently suffers from some of the worst air quality in the nation, and communities of color bear the brunt of these impacts. Furthermore, climate change is causing more frequent severe heat events (which are concerning in their own right) which contribute to increased formation of ground-level ozone. Simply put, as temperatures rise, so does the concentration of ozone pollution in the air.

Meanwhile, statewide, outdoor pollution from fossil fuel heating equipment caused an estimated 517 premature deaths in California in 2017, according to Harvard public health researchers.

The 2022 Air Quality Management Plan (AQMP) states that the “only way to achieve the required nitrogen oxide (NOx) reductions is through extensive use of zero-NOx technologies across all stationary and mobile sources.” The proposed zero-NOx regulations on residential storage water heaters (Rule 1121) and residential and commercial furnaces (Rule 1111) would eliminate an estimated 12% of the region’s NOx emissions from stationary sources.

Heating equipment can last multiple decades, so we must prioritize installing zero-emission equipment **at the time of burn-out** to avoid locking in decades of future pollution and gas costs that fall on ratepayers.

SCAQMD has an obligation to minimize the toxic air pollution South Coast residents are subjected to and acting without delay to adopt new appliance standards. Rules 1121 and 1111 will help protect the air quality and thus the **health** of all residents in the South Coast region (and beyond), especially those with the least means to buy air purifiers and similar technologies.

Thank you for your time and diligence in attending to this matter.

Subject: [EXTERNAL] Support for PARs 1111 and 1121

Dear SCAQMD board members,

Please vote Yes on proposed rules 1111 and 1121. I am writing to bring attention to the significant impact that fossil fuel furnaces and water heaters have on our air quality. In the South Coast Basin, these appliances release harmful levels of NOx and PM2.5, contributing to smog and poor air quality. Specifically, these sources emit over nine times more NOx and four times more PM2.5 than all power plants in the region combined. This also impacts the health of children. Please consider expanding the transition to pollution-free technology solutions. Everyone should have the right to benefit from cleaner, healthier alternatives.

Sincerely,
Alicia Coronel Tejada

*To AQMD Board President Delgado and Board Members,
As a resident of the City of Arcadia, CA, I support a transition to clean, zero-emission appliances to reduce greenhouse gases and pollutants that adversely affect our health.*

My home is a few miles from the edge of the Angeles National Forest in a location I thought was safe from wildfires when my husband and I bought it 27 years ago. We saw several fires in the hills above us, but still felt safe until the Bobcat fire in 2020 when we were only a block from an evacuation warning zone. And during the Eaton fire, we were IN an evacuation warning zone. We know a number of people who lost homes in Altadena/Pasadena -- in some cases farther from the flammable brush than where we are. I have to wonder, will our house burn the next time? And with the increasing pace of climate change, will the next time be in 4 years? Or 2 years? Or 1 year?

I am disappointed that the proposal has been weakened to cut less emissions. Please consider increasing the zero-emission sales targets to 50% in 2027 and 75% by 2029.

And please also stop delaying the rules. Pass PAR 1111 and 1121 as scheduled in May.

*Thank you.

SUPPORT for PARs 1111 and 1121

To the board of the SCAQMD,

I live and breathe in Southern California. Since I moved here in 1979, the air quality has improved by an enormous amount. But it is still not where it should be. SoCal still has the highest level of smog in the US, and our residents experience the effect of NOx emissions. My wife's asthma is aggravated on high-ozone days.

As residents of Altadena, we have lived the impact of climate-change-enhanced wildfires.

I urge the AQMD board to pass the amendments to PARs 1111 and 1121. The phased-in zero-emission requirements for space heating and water heating are the most effective ways to reduce NOx emissions; as a byproduct, they also reduce the greenhouse gas emissions that are destroying our climate.

The technology to meet these requirements already exists, has significant federal and state incentives, is improving every year, and is dropping rapidly in price. These technologies are often no more expensive to install, and save money over the longer run. And they will become cleaner as the electric grid becomes cleaner.

It is time to push back against landlords and SoCal gas. Their arguments are the same ones we have heard when any life-saving measures taken – requiring seat belts, unleaded gas, banning asbestos, reducing second-hand smoke, stopping the ozone hole, getting rid of acid rain. It is time to do what we should have done years ago - pass the amendments.

Subject: [EXTERNAL] Pass a strong Rule 1111 and 1121 to reduce NOx emissions, to protect public health

Chair Delgado and Members of the Governing Board South Coast Air Quality Management District (South Coast AQMD)

I urge you to pass a strong Rule 1111 and 1121 to reduce NOx emissions, to protect public health.

It is important to move forward with reducing NOx emissions, to lower air pollution in Southern California, to improve people's health. Air pollution can cause asthma, and childhood asthma that requires a parent to take time off from work is a financial penalty to that family, and an economic cost to society.

Changing hot water heaters and residential heating away from gas is an excellent way to reduce NOx. Heat pumps are efficient at using energy, since they are not directly using the electricity to heat.

Heat pump systems are available now ready to be installed, both for water heaters and space heating. By not having natural gas, the danger of fire is decreased.

There are some heat pump water heaters that can run on 110 V, so an electrical system upgrade is not necessarily needed.

The time to change over to a heat pump system is when the old water heater is about to die of old age.

Houses with air conditioners already have heat pumps. When the air conditioner dies, it makes sense to replace it with a heat pump that can function to heat as well as cool a house.

We have had no blackouts or brownouts recently due to shortage of generating capacity, so there should be no concern that adding heat pump systems will increase demand more than the electrical grid can handle. Power outages have been because of PSPS's, as electric utilities de-energize some lines to avoid the risk of setting a fire from fallen lines. Gas furnaces and hot water heaters will not run any better than electric ones during power shutoffs, since modern gas appliances rely on electronic ignition.

There should also be additional emphasis on solar hot water heating. Solar hot waters are commonplace in much of the world, where natural gas is not available.

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I urge you to adopt and implement strong clean air standards, specifically those targeting emissions from residential furnaces and water heaters. These life-saving regulations are crucial for the health and well-being of Southern Californians.

While other parts of the country may be lagging, California has the opportunity to lead the way in combating air pollution and climate change. Phasing out gas appliances in favor of highly efficient heat pumps is a common-sense solution, similar to our transition away from outdated technologies like fax machines and dial-up internet.

The benefits of these regulations are clear: cleaner air, reduced smog, and a healthier environment. The proposed rules would prevent thousands of premature deaths, asthma cases, and emergency room visits in our region. This is a significant public health improvement that we cannot afford to delay.

It's concerning to see the gas industry and its allies attempting to weaken these vital protections. Their efforts to create loopholes and delay implementation prioritize profits over public health. We must not allow them to lock us into decades of continued pollution. The recent wildfires in Los Angeles serve as a stark reminder of the urgent need for action on climate change and air quality.

I strongly support the South Coast Air Quality Management District moving forward with these life-saving regulations. Our health, our environment, and our future depend on it.

Sincerely,
Burt Culver

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Matthew Saunders

Subject: [EXTERNAL] RE: SUPPORT for Proposed Amended Rules 1111 and 1121

February 17, 2025

TO:
Chair Vanessa Delgado & Members of the Governing Board
South Coast Air Quality Management District
21865 Copley Drive, Diamond Bar, CA 91765
Via Email: cob@aqmd.gov

Dear Chair Delgado and Members of the Governing Board:

I SUPPORT South Coast AQMD's Proposed Amended Rules 1111 and 1121, which will improve air quality by creating zero-emission appliance standards for residential homes and small businesses.

I'm Josh Thomson, the owner of Thomson Air Conditioning a Southern California (Huntington Beach) small business engaged in Heating, Ventilation and Air Conditioning design, installation, and maintenance. We have 4 full time installation crews installing systems in Orange County, Los Angeles, and San Bernardino counties (I(ndio). We install about 15 heat pump systems per month, and only 5 gas furnaces.

The equipment that satisfies the zero-NOx requirement most affordably is heat pumps and heat pump water heaters. Heat pumps are proven, on-the-shelf technology that have been in use for decades; four key improvements 1-2 decades ago have made them the best heating and cooling solution available: inverter-driven motors, variable speed compressors and fans, better refrigerants, all of which help them achieve the highest efficiency with SEER ratings above 20 and HSPF ratings above 11. The myths that heat pumps don't work in cold climates are from the days before these improvements. Today's reality is that heat pumps are the dominant heating appliance in Norway, Sweden, Maine, and many other cold climate locales.

The price to install a heat pump is generally a little more than for a standalone gas furnace, and roughly equivalent to the price of a furnace and air conditioner. The wide range of incentives available from the federal government, state, utilities, SoCalREN, CCAs, and some cities generally more than offsets the cost difference between a like-for-like gas replacement versus fuel switching to a heat pump. The incentives cover electrical panel upgrades and new wiring circuits, in the minority of cases where those are needed. Operating costs (monthly energy bills) for our clients is usually lower for heat pumps than for gas appliances.

My workforce has gained expertise in heat pumps through training programs from Daikin and hands-on experience. There's not that much my technicians need to know that's new, because we already install air conditioners, and heat pumps are essentially two-way air conditioners, with a reversing valve. We also need to be more precise with equipment and duct sizing, since heat pumps are more sensitive to static pressure than furnace blowers.

My company specializes in heat pumps in order to provide our clients with the best possible indoor air quality. Among the most critical contributors to BAD air quality are the combustion byproducts from gas appliances, which include the deadly carbon monoxide and nitrogen oxides; and the methane that leaks from pipes, valves, and the appliances themselves into our dwelling units, which include benzene, hexane, toluene, heptane, cyclohexane, and more. These toxics are as bad as they sound, causing premature deaths, lost school and work days, and asthma attacks.

These rules will achieve a greater reduction of deadly emissions than any other rule in the last three decades. I appreciate the thorough research and industry engagement your staff have performed to support the advancement of an equitable transition to zero-emission technology aimed at cleaning up the state's worst air pollution. We respectfully ask that you put the state and its residents first by passing these critical healthy air standards

Thank you,

Sincerely,

Josh Thomson
Owner

Subject: [EXTERNAL] South Coast Air Quality Management District Mandate

Date February 17, 2025
To South Coast Air Quality Management District (SCAQMD) (cob@AQMD.gov)
Redlands City Councilmembers (thru City Clerk [REDACTED])
[REDACTED] (Upland City Councilmember)
From Sam Wong, MD
Subj Mandatory Transition to Zero-Emission Appliances

I understand that SCAQMD is proposing a mandatory transition to zero-emission appliances under Rule 1111 (Natural Gas-Fired Furnaces) and Rule 1121 (Water Heaters). The reported intent of this new policy was to eliminate nitrogen oxide emissions which are reported to be a key contributor to smog.

While there may be financial incentives for those who implement such a transition, those incentives ultimately are sourced from taxpayers – NOT the state or local governments. In addition, such financial incentives are often given as a single episode as the resident transitions at the beginning but not throughout the course of the use of the zero-emission appliance(s). As a taxpayer, I am opposed to such misleading “incentives.”

Conversion costs are often not cost-neutral to those who have limited and fixed income. Implementing such a costly and unnecessary mandate would be discriminatory (particularly age and race/national origin). I would not be surprised if costly litigation arises against SCAQMD on the implementation of such a mandate. Although you may brush such legal costs aside since “the government” will often absorb the costs, I would not be surprised if the tax-paying public will be informed of who specifically signed off on such costly mandates. Un-elected officials are also accountable to the taxpayers.

Sole reliance on a single energy source is fraught with energy-delivery vulnerabilities. We have seen major societal catastrophes when communities relied only on electricity during freezing climate. All successful and well-planned communities have source and process redundancies. That is so very basic to safe and intelligent governance! (Why do you suppose humans have two arms, two legs, two lungs, etc.?)

Respectfully,

Sam Wong, MD FACP

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because

Sincerely,
John Zinner
Santa Monica, CA

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Cynthia Cannady
Pasadena, CA

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Birgitta Martinez
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Terry Sanders

It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Denise Vandermeer
Woodland Hills, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Kimberly Leeds
Aliso Viejo, CA

James Chavez

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Patti Davis
Santa Monica, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency’s efforts to clean up harmful appliance pollution. It’s critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region’s smoggy skies and protect our health. We’re disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren’t niche appliances — they’ve become the new standard simply because they’re good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Cody Low

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Steven Konstantine
Burbank, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
J Cole
Joshua Tree, CA

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Jim Haley
Santa Clarita, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Lisa Mingear
Dana Point, CA

James Chavez

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Jeff Levicke
Valley Village, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Jo Kenney

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Karen Hellwig
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

To: Clerk of Board
Subject: [EXTERNAL] SUPPORT for PARs 1111 and 1121

To AQMD Board President Delgado and Board Members,

As a resident of the region, I support a transition to clean, zero-emission appliances to reduce air pollution and improve our health. We have been transitioning our home to all electric appliances and have put in solar panels. With the strong incentives offered, the cost has not been prohibitive. We need to continue to encourage people (forcefully if necessary) to make the necessary transition to zero emissions homes.

The devastation from the fires is due to climate change and we need leaders who will stop delaying the actions that will reduce further impacts of a warming climate. The technology is here, so there is really no excuse.

I'm disappointed that the proposal has been weakened to reduce fewer emissions. Please consider increasing the zero-emission sales targets to 50% in 2027 and 75% by 2029.

It is also critical to stop delaying the rules, and pass PAR 1111 and 1121 as scheduled in May.

Thank you,
Donielle

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Janice Hynek
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Cami Winikoff
Malibu, CA

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Alena Jorgensen
Temple City, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Darren Kloomok
Topanga, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I live in California and it's past time for the agency to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. It's ridiculous and counterproductive that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. It would appear your concessions are to the gas industry. The Board must ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row. Here in California (as you've seen with electric cars) heat pumps are the future. Why be "dinosaurs"?

Local leadership must stand up and clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. Stand strong for appliance standards!

Sincerely,
Cassandra Pierson

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Bret Polish
Reseda, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Constance Franklin
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

In 1970 , my sister boarded a plane from Hawaii to California. When she arrived at LAX, she had to have an ambulance called and she was rushed to the emergency room because she could not breath. The air in southern California was so bad, the doctors told her to never come back or she would die. We should never forget how bad the air was.

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Greg Sweel
Santa Monica, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

My family and I cheer in support of your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Dominique Holy
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Chelsey Marsing
Santa Monica, CA

Subject: [EXTERNAL] Please SUPPORT for PARs 1111 and 1121

Dear Chair Delgado and AQMD Board Members,

As a parent and a resident in the South Coast region, I would like for the air that my son breathes to be free of dangerous toxins. Please, follow your duty bound obligation and protect the health of the people you represent. Vote YES on Proposed Rules 1111 and 1121.

Clean air should not be up for debate. Please stand with public health, not profit seeking polluters, and vote YES on Rules 1111 and 1121.

Sincerely,
A parent

It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Nilofar Amier
Tarzana, CA

Subject: [EXTERNAL] SUPPORT for PARs 1111 and 1121

Dear AQMD Board President Delgado and Board Members,

As a resident of the region, I support a transition to clean, zero-emission appliances to reduce air pollution and improve our health.

I'm disappointed that the proposal has been weakened to reduce fewer emissions. Please consider increasing the zero-emission sales targets to 50% in 2027 and 75% by 2029.

It is also critical to stop delaying the rules, and pass PAR 1111 and 1121 as scheduled in May.

Thank you,

James Chavez

By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Gail Church
El Segundo, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Michelle Palladine
Palm Springs, CA

Dear South Coast Air Quality Management District,

Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air.

Please continue to support strong appliance standards and reject the gas industry's attempts to weaken and delay these regulations.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Grace Silva

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Joseph Zell

To: Clerk of Board
Subject: [EXTERNAL] SUPPORT for PARs 1111 and 1121

To AQMD Board President Delgado and Board Members,

The U.S. Green Building Council California (USGBC California) is supports a transition to clean, zero-emission appliances to reduce air pollution and improve our health. We represent residents and building occupants across the state, with regional chapters in San Diego, Orange County, Los Angeles, Central Coast, Central Valley, Bay Area, and Northern California (Redwood Empire).

We are disappointed that the proposal has been weakened to reduce fewer emissions. Please consider increasing the zero-emission sales targets to 50% in 2027 and 75% by 2029, as this is not only a climate issue; it is also a public health, energy justice, and environmental justice issue. It is critical to stop delaying the rules, and pass PAR 1111 and 1121 as scheduled in May.

About Us

The U.S. Green Building Council California's (USGBC California) deep bench of members are sustainability and green building professionals with a strong commitment to addressing climate change and other local, state, and international environmental issues. Our members are designers, engineers, public agency and utility staff, consultants, product manufacturers, and service providers. Our mission is to transform California through the built environment into a more sustainable, resilient, and equitable place for all. Our goals include advancing environmental justice by developing diverse talent, and systemic change based on impactful solutions to address our urgent environment and social challenges.

Thank you.
robyn

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Rebecca Wang
Alhambra, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I am a social worker who collaborates with agencies and community members constantly to work on improving quality of life through various means. Environmental issues are not niche issues that affect only a few. They are issues that affect you and your own families as well as our and our communities. It behooves you then to pay attention to what will be healthy and helpful for everyday citizens in the long run as that is the main purpose of your existence. To pay more attention to financial interests is immoral, unethical, and illogical and unsustainable.

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Katrina Stump
La Mirada, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Joan Peter

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Sean Pardee
Stanton, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Karen McCaw
Los Angeles, CA

To: Jennifer Vinh; Vanessa Delgado; Clerk of Board
Subject: [EXTERNAL] Pass a strong Rule 1111 and 1121 to reduce NOx emissions, to protect public health

Chair Delgado and Members of the Governing Board South Coast Air Quality Management District (South Coast AQMD)

I urge you to pass a strong Rule 1111 and 1121 to reduce NOx emissions, to protect public health.

It is important to move forward with reducing NOx emissions, to lower air pollution in Southern California, to improve people's health. Air pollution can cause asthma, and childhood asthma that requires a parent to take time off from work is a financial penalty to that family, and an economic cost to society.

Changing hot water heaters and residential heating away from gas is an excellent way to reduce NOx. Heat pumps are efficient at using energy, since they are not directly using the electricity to heat.

Heat pump systems are available now ready to be installed, both for water heaters and space heating. By not having natural gas, the danger of fire is decreased.

There are some heat pump water heaters that can run on 110 V, so an electrical system upgrade is not necessarily needed.

The time to change over to a heat pump system is when the old water heater is about to die of old age.

Houses with air conditioners already have heat pumps. When the air conditioner dies, it makes sense to replace it with a heat pump that can function to heat as well as cool a house.

We have had no blackouts or brownouts recently due to shortage of generating capacity, so there should be no concern that adding heat pump systems will increase demand more than the electrical grid can handle. Power outages have been because of PSPS's, as electric utilities de-energize some lines to avoid the risk of setting a fire from fallen lines. Gas furnaces and hot water heaters will not run any better than electric ones during power shutoffs, since modern gas appliances rely on electronic ignition.

There should also be additional emphasis on solar hot water heating. Solar hot waters are commonplace in much of the world, where natural gas is not available.

Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Dylan Gasperik
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Nora Coyle
Anaheim, CA

We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Cabezas Maritza
Tarzana, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Hillary Ostrow
Encino, CA

Subject: [EXTERNAL] SUPPORT FOR PARs 1111 and 1121

- TO AQMD Board President Delgado and Board Members:
-

I am a resident of Mar Vista which is within the region covered by the AQMD.

Please be advised that I support the immediate transition to clean, zero-emission appliances to reduce air pollution and improve our health. My wife suffers from respiratory issues and it is important for the entire population in the region to have healthier air as soon as humanly possible.

It is a disgrace that the proposal has been weakened by diluting its requirements and delaying its deadlines. Simply put, the AQMD needs to undertake every possible action to reduce air pollution AS SOON AS POSSIBLE BY AS MUCH AS POSSIBLE! The situation we are in is so dire that reducing requirements and extending deadlines is actually counter to the mandate of the AQMD. The situation is nothing less than an emergency requiring urgent measures.

I hereby request that AQMD increase the zero-emission sales targets to 50% in 2027 and 75% by 2029. Anything less is unacceptable.

I also request that the AQMD immediately cease delaying the rules and pass PAR 1111 and 1121 as scheduled in May.

Thank you.

Sent: Tuesday, February 18, 2025 5:12 PM
To: Vanessa Delgado; Clerk of Board
Subject: [EXTERNAL] SUPPORT for PARs 1111 & 1121

Dear Chairwoman Delgado
cc: Clerk of Board

I live in Menlo Park, San Mateo County. One of the most valued aspects of living here is our incredible air quality.

I want this same quality for all residents in our beautiful state. Everyone deserves the same quality of life, health and wellbeing that we gain through clean air.

Please vote YES on Proposed Rules 1111 and 1121

Some reasons to vote Yes:

...
Californians who live, work, and play in the South Coast region urgently need healthier air standards for improved air quality and public health. Rules 1111 and 1121 will help communities transition toward more affordable, energy-efficient homes while expanding access to life-saving cooling, building climate resilience, and cutting climate pollution.

...
The South Coast Basin suffers from the most deadly air quality in the nation. Setting strong air quality standards to cut pollution from furnaces and water heating equipment will save lives.

...
Burning fossil fuels in homes and buildings in the SCAQMD region alone is responsible for more than 13,000 cases of respiratory symptoms and 24,000 work loss days per year, with total health impacts valued over \$3.7 billion annually

...
Clean, zero-emission appliances are increasingly affordable with local, state, and federal incentives. Public health and protection from extreme heat should drive decision-making on these important rule amendments for the millions of residents in the Air District. South Coast AQMD has the power to protect our health and safety in the coming years.

Thank you for your consideration and attention to this matter.

Yours,
Megan O'Grady Greene

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Hildy Meyers
Huntington Beach, CA

Cc: Clerk of Board
Subject: [EXTERNAL] Support: Proposed Rules 1111 & 1121

Dear Chair Delgado,

Please vote YES on Proposed Rules 1111 & 1121 nitrogen oxide (NOx) reductions on residential and commercial furnaces and residential water heaters.

By approving these two rules, SCAQMD can build on the 2022 Air Quality Management Plan and the positive changes to Rule 1146.2, impacting an additional 12% of NOx emissions from stationary sources across the Los Angeles Basin.

To improve air quality for the 17 million people in the South Coast district, there is an urgent need to phase in the sale of clean HVAC technologies across the commercial, residential, and industrial sectors. Pollution-free heating technologies will help the region become more resilient in the face of climate impacts like wildfires and heat waves. Rules 1111 & 1121 ensure that when pollution equipment burns out, they are replaced with pollution-free technology like heat pumps that help transition communities toward healthier, more affordable homes.

Electricity rates are high for sure, and they're going up with grid modernization, expansion, and hardening against wildfire. Energy affordability is a top concern, but heat pumps are highly efficient and households can take advantage of bill savings when replacing inefficient AC units or gas furnaces. CARE discounts, federal HEAR rebates and other local and state incentives can also help with accessing appliances and weatherization to ensure proper insulation and bill savings.

Helping residents make the switch to electric will benefit public health immediately and save money in the long-term. Proposed Rules 1111 & 1121 are both examples of sound, forward thinking policy.

Best regards,
Dennis Murphy

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Larry Fish
Moreno Valley, CA

Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Anja Stadelmann
Los Angeles, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

RE: SUPPORT for Proposed Amended Rules 1111 and 1121

Dear Chair Delgado and Members of the Governing Board:

As Co-Presidents of the Hubert H. Humphrey Democratic Club (HHDC), we write on behalf of our whole club in support of the South Coast AQMD's efforts to clean up appliance pollution through Amended Rules 1111 and 1121. This proposed package will achieve more emissions reductions than any other effort passed in over three decades. The effort is consistent with the 2022 Air Quality Management Plan, which determined that "[t]he only way to achieve the required NOx reductions is through extensive use of zero-emission technologies across all stationary and mobile sources."

Last year, SCAQMD passed Rule 1146.2, a zero-emission appliance standard that will reduce emissions of harmful nitrogen oxides (NOx) from industrial, commercial, and multifamily buildings. Rules 1111 and 1121 expand on these efforts to improve air quality through zero-emission appliance standards for residential homes. By allowing existing appliances to serve their full capitalized lifecycle, but be replaced with zero-Nox at end of life, these rules are without a doubt the most affordable, equitable way to change away from the damaging status quo.

HHDC advocates for the financial and health well-being of low income and disadvantaged communities in Artesia and Cerritos, and surrounding communities. We know that homeowners will appreciate the benefits of zero emissions appliances in their homes from reduced asthma attacks, improved indoor air quality, and especially reduced monthly combined energy bills. They will immediately observe that one can live a modern, comfortable, affordable lifestyle without the so-called "natural" gas appliances that are in fact poisoning our children and elderly.

Given the serious pollution in this region—some of the worst in the country—advancing healthy air standards is desperately needed. These rules will ensure protection for the 18 million residents in the Air Basin, and as a tremendous co-benefit, help accelerate the state's building decarbonization progress.

We appreciate all the work staff have done to support advancement of an equitable transition to zero-emission technology aimed at cleaning up the state's worst air pollution. We respectfully ask that you put our community members first by passing these critical healthy air standards.

Thank you,
Sincerely,

Catherine Pascual

Subject: [EXTERNAL] I SUPPORT Rules 1111 and Rule 1121 and passing as strong as possible to clean up our region's air

Dear Clerk of the Board - South Coast AQMD,

Do not let Trump and his faction try to eliminate what you are doing.

Dear Chair Delgado and AQMD Board Members,

I support your agency's efforts to clean up harmful appliance pollution. The South Coast Air Quality Management District must make Rules 1111 and 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that would result in fewer emissions reductions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. The Board must ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances -- they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and reduce pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future.

We would like to encourage you to stand for strong appliance standards.

Sincerely,

Tom Strout

It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
j yudell
Santa Monica, CA

Subject: [EXTERNAL] I SUPPORT Rules 1111 and Rule 1121 and passing as strong as possible to clean up our region's air

Dear Clerk of the Board - South Coast AQMD,

Please help save our planet and save 4,000 lives.. We must have clean air!

Dear Chair Delgado and AQMD Board Members,

I support your agency's efforts to clean up harmful appliance pollution. The South Coast Air Quality Management District must make Rules 1111 and 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that would result in fewer emissions reductions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. The Board must ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances -- they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and reduce pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future.

We would like to encourage you to stand for strong appliance standards.

Sincerely,

helen wright

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Marisa Landsberg
Manhattan Beach, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Christopher Hall
Glendale, CA

To: Clerk of Board
Subject: [EXTERNAL] Support for PARs 1111 and 1121

Dear South Coast Air Quality Management District Board,

I'm writing in support of Proposed Amended Rules 1111 and 1121 to reduce NOx emissions. As residents of the basin who live near two freeways and a gas-burning power plant, my family and I face significant air quality impacts. We support strong rules to reduce air pollution from gas-fired furnaces and water heaters.

We have the capability to address increased electric demand and the concerns of those who need financial assistance. Concerns about those issues should not be used as an excuse not to act.

Please don't delay in passing these rules, and please increase the zero-emission sales targets to 50% in 2027 and 75% by 2029.

Many people who live in the basin do not appreciate how much gas-burning appliances in the built environment impacts our health. Also, many industry actors are working to keep the status quo at the risk of the citizens' health. **The SCAQMD should pass these rules because they will further its mission to clean the air and protect the health of air district residents.**

Sincerely,
Kate Unger

Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Sylvia De Baca

Subject: [EXTERNAL] SUPPORT for PARs 1111 and 1121

To AQMD Board President Delgado and Board Members,

As a resident of 90026 Silverlake region of Los Angeles, I support a transition to clean, zero-emission appliances to reduce air pollution and improve our health.

I'm disappointed that the proposal has been weakened to reduce fewer emissions. Please consider increasing the zero-emission sales targets to 50% in 2027 and 75% by 2029.

It is also critical to stop delaying the rules, and pass PAR 1111 and 1121 as scheduled in May.

Thank you.

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency’s efforts to clean up harmful appliance pollution. It’s critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region’s smoggy skies and protect our health. We’re disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren’t niche appliances — they’ve become the new standard simply because they’re good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Norman Day

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. In fact, the changes in the agency's proposal which would lead to fewer emissions being reduced would be a mistake. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Thank you for your kind attention and efforts.

Sincerely,
Nami H
Los Angeles, CA

To: Clerk of Board
Subject: [EXTERNAL] I SUPPORT Rules 1111 and Rule 1121 and passing as strong as possible to clean up our region's air

Dear Clerk of the Board - South Coast AQMD,

You have my support.

Dear Chair Delgado and AQMD Board Members,

I support your agency's efforts to clean up harmful appliance pollution. The South Coast Air Quality Management District must make Rules 1111 and 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that would result in fewer emissions reductions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. The Board must ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances -- they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and reduce pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future.

We would like to encourage you to stand for strong appliance standards.

Sincerely,

Allison Morrell

If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances — they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and cut pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future. We encourage you to stand for strong appliance standards.

Sincerely,
Norm Stanley
Yucaipa, CA

Subject: [EXTERNAL] Please make Rule 1111 and Rule 1121 as strong as possible to clean up our region's air

Dear South Coast Air Quality Management District,

I support your agency's efforts to clean up harmful appliance pollution. It's critical for the South Coast Air Quality Management District to make Rule 1111 and Rule 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that make the proposal reduce fewer emissions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. It is vital that the Board ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Subject: [EXTERNAL] I SUPPORT Rules 1111 and Rule 1121 and passing as strong as possible to clean up our region's air

Dear Clerk of the Board - South Coast AQMD,

I truly believe the most important thing to take care of right now is protecting the environment. Policies must be in place to keep moving in a positive direction with this and help undo the damage we are already doing. Please maintain a strong stance to clean our air. Thank you.

Dear Chair Delgado and AQMD Board Members,

I support your agency's efforts to clean up harmful appliance pollution. The South Coast Air Quality Management District must make Rules 1111 and 1121 as strong as possible to clean up our region's smoggy skies and protect our health. We're disappointed that the agency is proposing changes that would result in fewer emissions reductions. If the proposal is kept strong, this would eliminate 10 tons of nitrogen oxides (NOx) per day and prevent an astounding 4,000 early deaths in Southern California. By contrast, the new proposal offers too many concessions to the gas industry. The Board must ensure any manufacturer targets are strong and reflect the need for clean air.

Despite what the gas industry claims, the prior proposal was already flexible and reasonable, providing exceptions for homes in higher altitudes, for schools with larger boilers, and for multifamily homes. Plus, electric space and water heaters aren't niche appliances -- they've become the new standard simply because they're good products. Heat pumps are 3 to 5 times more efficient than gas furnaces and they make spaces more comfortable. These advantages are already winning people over: in 2024, heat pumps outsold gas furnaces for the third year in a row.

We need local leadership now more than ever to clean our air and reduce pollution. Strong rules that reflect the ambition necessary to reduce harmful pollution are vital to help Southern California move toward a healthier future.

We would like to encourage you to stand for strong appliance standards.

Sincerely,

Ronald Morein

Subject: [EXTERNAL] Comment,

SCAQMD your fossil fuels are causing major problems in homes and businesses in parts of California. Homeowners and business owners are tired of your constant and continuous BS. We definitely have numerous eyes on you now, 365 days a year.

We are not going to take the crap you dish out. SCAQMD, you are the problem in our communities and neighborhoods. You always were! Fossil fuels are something in the past. Electric homes and commercial buildings are our direction Today and long into the future.

I am not happy with SCAQMD. Nobody is and we are not going to let you forget about that.

Alan Solomon
